Bean House UI Designs

Introduction

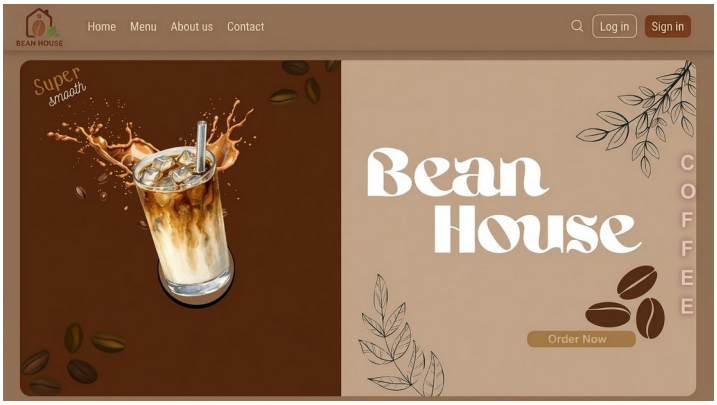

Bean House is a coffee shop ordering system designed for both customers and baristas. The user interface uses a warm brown and beige colour palette that matches the coffee theme. Every screen shares the same navigation bar (Home, Menu, About us, Contact) along with search and Log in / Sign in options, so the design feels consistent from one screen to the next.

The design is made up of four main screens:

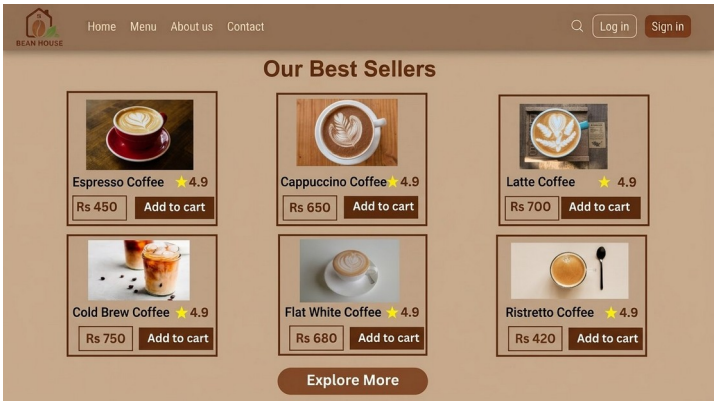

- **Hero & Landing Screen:** The first screen a customer sees. It shows the brand name, a strong coffee visual and an “Order Now” button that takes the user straight to ordering.
- **Best Sellers Menu:** Shows popular drinks such as Espresso, Cappuccino, Latte, Cold Brew, Flat White and Ristretto. Each item has an image, rating, price and an “Add to cart” button, so ordering takes only a few clicks.
- **Customizer Drink:** Lets customers build their own drink by choosing cup size, milk type, espresso shots, sweetness level and extra toppings. The total price and preparation time are shown before the order is added.
- **Barista Order Management Dashboard:** Made for staff. It shows pending, in-progress and completed orders along with the estimated wait time. Orders move through the Received, Brewing and Ready for Pickup columns and are marked as online or in-store.

Overall, the goal of this interface is to make ordering simple and enjoyable for customers and to help baristas manage incoming orders efficiently.
